

PRIMERLESS PRODUCTS - LINE CARD

APPLICATION AEROSPACE, ARCHITECTURE, AUTOMOTIVE AND TRANSIT GLAZING, ELECTRONICS AND EYEWEAR					
Product	Description	Coating Method	Substrate	Cure	Features
CrystalCoat™ PF-2500 <i>CrystalCoat™</i>	Polysiloxane-based coating contains a reduced level (25%) of adhesion promoter for enhanced impact resistance properties.	Dip	Primer-Free Adhesion to Polycarbonate (PC).	Thermal	Optical Clarity, Abrasion, Chemical and Impact Resistant
CrystalCoat PF-4200	Polysiloxane-based coating provides excellent abrasion and chemical resistance. Ideally suited for ophthalmic and other high performance applications where optical clarity and high durability are required.	Dip	Primer-Free Adhesion to PC	Thermal	Optical Clarity, Abrasion and Chemical Resistant, Flexibility, Compatible with A/R, Mirror and Metalizing Lens Treatments.
